B & J Metal Fab., Inc. Premier Color Selector

Mill Steel offers DURASTAR® ULTRA-COOL® coatings, the coolest silicone-modified polyester coatings under the sun. Formulated with PPG's ULTRA-Cool infrared-reflective pigments, these high-performance products protect and beautify metal siding, panels and building components, and are available in an extensive array of light and dark colors to meet cool roof requirements established by LEED®, ENERGY STAR®, the Cool Roof Rating Council (CRRC), Title 24 and ASHRAE 90.1.

Based on proprietary resin technology and an innovative formulation process, *Durastar Ultra-Cool* coatings deliver the exceptional exterior durability required for tough agricultural, industrial and building applications, along with an optimum balance of exterior gloss retention, chalk and fade resistance, forming flexibility and overall cost-effectiveness.

Durastar Ultra-Cool coatings are designed for two-coat application over properly cleaned and pretreated metal surfaces, and are rigorously tested for South Florida weather exposure and resistance to salt-spray, humidity, acid rain, abrasion, detergents and other hazards.
